How it works

Isitchecked.com is based on a number of technologies that we have combined into a complete solution for your business checklist needs.

Our system allows you to create any number of areas or zones within your premises that are required to be part of a checklist. Each of these areas will have a unique QR code assigned to it.

You can assign a number of choices to each of your areas, each set of choices are unique to each group of employees that you have.

Areas

Each area can be assigned a schedule, enabling specific checks to be done at specific times, by specific groups.

A tolerance level can be set e.g. allowing an extra window of say 15 minutes for a check to be carried out.

After the tolerance level has been reached, the system will alert your selected group of employees, such as managers or supervisors, that this check has been missed.

Add, alter, edit or delete areas
